

AFTER-HOURS PLANNING

If your pump alarm goes off:

1. Try to fix the problem that is causing the alarm to go off – review the “Troubleshooting alarms” info sheet.
2. If unable to solve – turn off the pump using the power button on the side, and call the PIVOT Clinic in the morning.
3. DO NOT go to a hospital emergency room for a pump alarm. Hospital emergency staff are not familiar with this pump, and will not be able to solve any pump alarms.
4. If after 5:00pm on weekdays and weekends, try to contact the Vascular Access Team.
5. Contact your local health care centre (where you get your dressing changed).

Note: The BC Nurse Line (8-1-1) is also not familiar with this pump.
